

By now, you've probably noticed that the board I'm using isn't quite wide enough for my shield design. I would have to add some foamcore to the sides. To this end, I took my utility knife and cut along the curved edges that I had just drawn, cutting away the marked sections.

I made sure to save the 4 foamcore scraps that I had cut away from the corners...

I took one of the corner scraps I had cut from the **top section of the shield** and a corner scrap from the **bottom**, and hotglued them together straight-edge-to-straight-edge like so:
